

Advanced Web Intelligence Reporting V4

Web Intelligence is a query, reporting and analysis tool that allows report designers to access the data in their corporate databases directly from within BI Launchpad and to present and analyse this information in a Web Intelligence document. This course is designed to give you the comprehensive skills needed to apply alternative query and reporting techniques when creating complex Web Intelligence documents. After completing this course, you will be able to combine queries and use sub-queries. You will also be able to use character and date string functions, create variables using "If" logic, redefine the behaviour of variables by using calculation contexts, as well as use advanced reporting techniques such as Data Tracking and Hyperlinks.

On completion, delegates will be able to:

- Use more advanced query techniques to request complex data sets
- Manipulate character and date strings
- Use If...Then...Else logic to group data and change the behaviour of variables
- Use more advanced variable functions
- Change variable calculation behaviour using contexts
- Compare current data against previous data with Data Tracking
- Use hyperlinks to other web sites and even to other Web Intelligence documents.

Who should attend?

The target audience for this course is report designers who are experienced Web Intelligence users and who need to create advanced Web Intelligence documents.

Prerequisites

Attendance on a BusinessObjects Web Intelligence report creation course, or at least 2 months extensive experience building Web Intelligence reports.

Practical work

Practical sessions will reinforce many of the topics covered and are used extensively throughout this course. These allow delegates to have direct hands-on practice using BusinessObjects Web Intelligence to build queries and reports, and perform analysis on retrieved data, in the training environment.

Course Duration

1 day

Related and follow-on courses

None

Course Contents

Advanced Query Techniques

- Using combined queries
- Using sub-queries
- Creating a query based on another query

Calculation Contexts

- Understanding calculation contexts
- Redefining calculation contexts

Character and Date String Functions

- Using the character string functions
- Concatenating different data types
- Using date functions

Using If Logic

- Grouping data using If() logic
- Using If() to modify calculation behaviour

Advanced Reporting Features

- Using Data Tracking
- Running Calculations

Hyperlinks

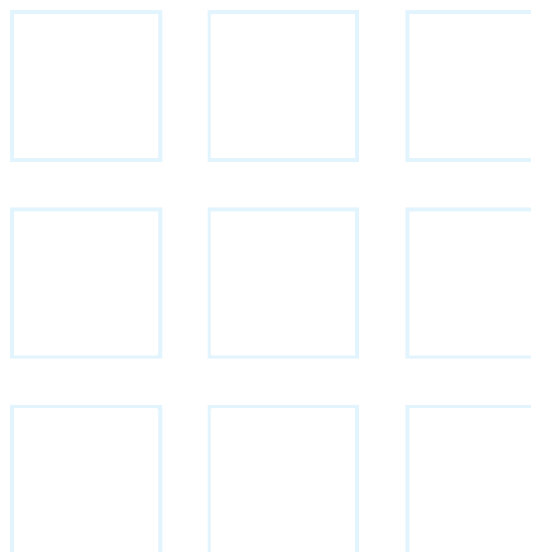

- Linking to web sites
- Linking to other documents and passing parameters.

Acuma Education

All Acuma courses are delivered by trainers who are highly experienced consultant practitioners. This rich project experience coupled with professional training skills helps delegates to focus on how the course contents can be put into practice in their workplace.

Acuma delivers courses from dedicated training facilities in Manchester, Birmingham and London, but also deliver training offsite using suites of laptops, with the option to customise courses to use your own business data and tailored to your exact training needs. The most appropriate training format depends upon your training objectives, number of learners, timescales, budgets and delivery logistics. Whatever your needs, Acuma will find the approach most suited to them.

Acuma Education's seal of quality is demonstrated through consistent achievement of the prestigious "Gold Standard" from the Learning and Performance Institute.

Acuma is an Information Management (IM) Specialist. Acuma is part of the Saksoft group and provides solutions, which are unique, flexible and cost-effective service blending local high value consultancy and global high quality project delivery. Acuma delivers business improvements by drawing together strategy, technology and methods of Information Management into a single philosophy called the Information Value Model (IVM).
